Chapter 1- Real Numbers

EXERCISE 1.1

Choose the correct answer from the given four options in the following questions:

1. For some integer m , every even integer is of the form:

- (A) m (B) $m + 1$
(C) $2m$ (D) $2m + 1$

Solution:

(C) $2m$

Explanation:

Even integers are those integers which are divisible by 2.

Hence, we can say that every integer which is a multiple of 2 must be an even integer.

Therefore, let us conclude that,

for an integer ' m ', every even integer must be of the form

$$2 \times m = 2m.$$

Hence, **option (C)** is the correct answer.

2. For some integer q , every odd integer is of the form

- (A) q (B) $q + 1$
(C) $2q$ (D) $2q + 1$

Solution:

(D) $2q + 1$

Explanation:

Odd integers are those integers which are not divisible by 2.

Hence, we can say that every integer which is a multiple of 2 must be an even integer, while 1 added to every integer which is multiplied by 2 is an odd integer.

Therefore, let us conclude that,

for an integer ' q ', every odd integer must be of the form

$$(2 \times q) + 1 = 2q + 1.$$

Hence, **option (D)** is the correct answer.

3. $n^2 - 1$ is divisible by 8, if n is

- (A) an integer (B) a natural number
(C) an odd integer (D) an even integer

Solution:

(C) an odd integer

Explanation:

$$\text{Let } x = n^2 - 1$$

In the above equation, n can be either even or odd.

Let us assume that $n = \text{even}$.

So, when $n = \text{even}$ i.e., $n = 2k$, where k is an integer,

We get,

$$\Rightarrow x = (2k)^2 - 1$$

$$\Rightarrow x = 4k^2 - 1$$

At $k = -1$, $x = 4(-1)^2 - 1 = 4 - 1 = 3$, is not divisible by 8.

At $k = 0$, $x = 4(0)^2 - 1 = 0 - 1 = -1$, is not divisible by 8

Let us assume that $n = \text{odd}$:

So, when $n = \text{odd}$ i.e., $n = 2k + 1$, where k is an integer,

We get,

$$\Rightarrow x = 2k + 1$$

$$\Rightarrow x = (2k+1)^2 - 1$$

$$\Rightarrow x = 4k^2 + 4k + 1 - 1$$

$$\Rightarrow x = 4k^2 + 4k$$

$$\Rightarrow x = 4k(k+1)$$

At $k = -1$, $x = 4(-1)(-1+1) = 0$ which is divisible by 8.

At $k = 0$, $x = 4(0)(0+1) = 0$ which is divisible by 8.

At $k = 1$, $x = 4(1)(1+1) = 8$ which is divisible by 8.

From the above two observations, we can conclude that, if n is odd, $n^2 - 1$ is divisible by 8.

Hence, **option (C)** is the correct answer.

4. If the HCF of 65 and 117 is expressible in the form $65m - 117$, then the value of m is

(A) 4 (B) 2

(C) 1 (D) 3

Solution:

(B) 2

Explanation:

Let us find the HCF of 65 and 117,

$$117 = 1 \times 65 + 52$$

$$65 = 1 \times 52 + 13$$

$$52 = 4 \times 13 + 0$$

Hence, we get the HCF of 65 and 117 = 13.

According to the question,

$$65m - 117 = 13$$

$$65m = 117 + 13 = 130$$

$$\therefore m = 130/65 = 2$$

Hence, **option (B)** is the correct answer.

5. The largest number which divides 70 and 125, leaving remainders 5 and 8, respectively, is

(A) 13 (B) 65

(C) 875 (D) 1750

Solution:

(A) 13

Explanation:

According to the question,

We have to find the largest number which divides 70 and 125, leaving remainders 5 and 8.

This can be also written as,

To find the largest number which exactly divides $(70 - 5)$, and $(125 - 8)$

The largest number that divides 65 and 117 is also the Highest Common Factor of 65 and 117

Therefore, the required number is the HCF of 65 and 117

Factors of 65 = 1, 5, 13, 65

Factors of 117 = 1, 3, 9, 13, 39, 117

Common Factors = 1, 13

Highest Common factor (HCF) = 13

i.e., the largest number which divides 70 and 125, leaving remainders 5 and 8, respectively = 13

Hence, **option (A)** is the correct answer.

NAGEEN GROUP
tamso ma jyotirgamaya

EXERCISE 1.2

1. Write whether every positive integer can be of the form $4q + 2$, where q is an integer. Justify your answer.

Solution:

No, every positive integer cannot be of the form $4q + 2$, where q is an integer.

Justification:

All the numbers of the form $4q + 2$, where ' q ' is an integer, are even numbers which are not divisible by '4'.

For example,

When $q=1$,

$$4q+2 = 4(1) + 2 = 6.$$

When $q=2$,

$$4q+2 = 4(2) + 2 = 10$$

When $q=0$,

$$4q+2 = 4(0) + 2 = 2 \text{ and so on.}$$

So, any number which is of the form $4q+2$ will give only even numbers which are not multiples of 4.

Hence, every positive integer **cannot** be written in the form $4q+2$

2. "The product of two consecutive positive integers is divisible by 2". Is this statement true or false? Give reasons.

Solution:

Yes, the statement "the product of two consecutive positive integers is divisible by 2" is true.

Justification:

Let the two consecutive positive integers = $a, a + 1$

According to Euclid's division lemma,

We have,

$$a = bq + r, \text{ where } 0 \leq r < b$$

For $b = 2$, we have $a = 2q + r$, where $0 \leq r < 2 \dots (i)$

Substituting $r = 0$ in equation (i),

We get,

$$a = 2q, \text{ is divisible by 2.}$$

$$a + 1 = 2q + 1, \text{ is not divisible by 2.}$$

Substituting $r = 1$ in equation (i),

We get,

$$a = 2q + 1, \text{ is not divisible by 2.}$$

$$a + 1 = 2q + 1 + 1 = 2q + 2, \text{ is divisible by 2.}$$

Thus, we can conclude that, for $0 \leq r < 2$, one out of every two consecutive integers is divisible by 2. So, the product of the two consecutive positive numbers will also be even.

Hence, the statement "product of two consecutive positive integers is divisible by 2" is true.

3. "The product of three consecutive positive integers is divisible by 6". Is this statement true or false? Justify your answer.

Solution:

Yes, the statement “the product of three consecutive positive integers is divisible by 6” is true.

Justification:

Consider the 3 consecutive numbers 2, 3, 4

$$(2 \times 3 \times 4)/6 = 24/6 = 4$$

Now, consider another 3 consecutive numbers 4, 5, 6

$$(4 \times 5 \times 6)/6 = 120/6 = 20$$

Now, consider another 3 consecutive numbers 7, 8, 9

$$(7 \times 8 \times 9)/6 = 504/6 = 84$$

Hence, the statement “product of three consecutive positive integers is divisible by 6” is true.

4. Write whether the square of any positive integer can be of the form $3m + 2$, where m is a natural number. Justify your answer.

Solution:

No, the square of any positive integer cannot be written in the form $3m + 2$ where m is a natural number

Justification:

According to Euclid’s division lemma,

A positive integer 'a' can be written in the form of $bq + r$

$a = bq + r$, where b, q and r are any integers,

For $b = 3$

$a = 3(q) + r$, where, r can be an integers,

For $r = 0, 1, 2, 3, \dots$

$3q + 0, 3q + 1, 3q + 2, 3q + 3, \dots$ are positive integers,

$$(3q)^2 = 9q^2 = 3(3q^2) = 3m \text{ (where } 3q^2 = m)$$

$$(3q+1)^2 = (3q+1)^2 = 9q^2+1+6q = 3(3q^2+2q) + 1 = 3m + 1 \text{ (Where, } m = 3q^2+2q)$$

$$(3q+2)^2 = (3q+2)^2 = 9q^2+4+12q = 3(3q^2+4q) + 4 = 3m + 4 \text{ (Where, } m = 3q^2+2q)$$

$$(3q+3)^2 = (3q+3)^2 = 9q^2+9+18q = 3(3q^2+6q) + 9 = 3m + 9 \text{ (Where, } m = 3q^2+2q)$$

Hence, there is no positive integer whose square can be written in the form $3m + 2$ where m is a natural number.

5. A positive integer is of the form $3q + 1$, q being a natural number. Can you write its square in any form other than $3m + 1$, i.e., $3m$ or $3m + 2$ for some integer m ? Justify your answer.

Solution:

No.

Justification:

Consider the positive integer $3q + 1$, where q is a natural number.

$$(3q + 1)^2 = 9q^2 + 6q + 1$$

$$= 3(3q^2 + 2q) + 1$$

$$= 3m + 1, \text{ (where } m \text{ is an integer which is equal to } 3q^2 + 2q.$$

Thus $(3q + 1)^2$ cannot be expressed in any other form apart from $3m + 1$.

EXERCISE 1.3

PAGE NO: 6

1. Show that the square of any positive integer is either of the form $4q$ or $4q + 1$ for some integer q .

Solution:

According to Euclid's division lemma,

$$a = bq + r$$

According to the question,

When $b = 4$,

$$a = 4k + r, 0 \leq r < 4$$

When $r = 0$, we get, $a = 4k$

$$a^2 = 16k^2 = 4(4k^2) = 4q, \text{ where } q = 4k^2$$

When $r = 1$, we get, $a = 4k + 1$

$$a^2 = (4k + 1)^2 = 16k^2 + 1 + 8k = 4(4k^2 + 2k + 1) + 1 = 4q + 1, \text{ where } q = k(4k + 2)$$

When $r = 2$, we get, $a = 4k + 2$

$$a^2 = (4k + 2)^2 = 16k^2 + 4 + 16k = 4(4k^2 + 4k + 1) = 4q, \text{ where } q = 4k^2 + 4k + 1$$

When $r = 3$, we get, $a = 4k + 3$

$$a^2 = (4k + 3)^2 = 16k^2 + 9 + 24k = 4(4k^2 + 6k + 2) + 1 = 4q + 1, \text{ where } q = 4k^2 + 6k + 2$$

Therefore, the square of any positive integer is either of the form $4q$ or $4q + 1$ for some integer q .

Hence Proved.

2. Show that cube of any positive integer is of the form $4m$, $4m + 1$ or $4m + 3$, for some integer m .

Solution:

Let a be any positive integer and $b = 4$.

According to Euclid Division Lemma,

$$a = bq + r \quad [0 \leq r < b]$$

$$a = 3q + r \quad [0 \leq r < 4]$$

According to the question, the possible values of r are,

$$r = 0, r = 1, r = 2, r = 3$$

When $r = 0$,

$$a = 4q + 0$$

$$a = 4q$$

Taking cubes on LHS and RHS,

We have,

$$a^3 = (4q)^3$$

$$a^3 = 4(16q^3)$$

$$a^3 = 9m \quad [\text{where } m \text{ is an integer} = 16q^3]$$

When $r = 1$,

$$a = 4q + 1$$

Taking cubes on LHS and RHS,

We have,

$$a^3 = (4q + 1)^3$$

$$a^3 = 64q^3 + 1^3 + 3 \times 4q \times 1(4q + 1)$$

$$a^3 = 64q^3 + 1 + 48q^2 + 12q$$

$$a^3 = 4(16q^3 + 12q^2 + 3q) + 1$$

$$a^3 = 4m + 1 \quad [\text{where } m \text{ is an integer} = 16q^3 + 12q^2 + 3q]$$

When $r = 2$,

$$a = 4q + 2$$

Taking cubes on LHS and RHS,

We have,

$$a^3 = (4q + 2)^3$$

$$a^3 = 64q^3 + 2^3 + 3 \times 4q \times 2(4q + 2)$$

$$a^3 = 64q^3 + 8 + 96q^2 + 48q$$

$$a^3 = 4(16q^3 + 2 + 24q^2 + 12q)$$

$$a^3 = 4m \quad [\text{where } m \text{ is an integer} = 16q^3 + 2 + 24q^2 + 12q]$$

When $r = 3$,

$$a = 4q + 3$$

Taking cubes on LHS and RHS,

We have,

$$a^3 = (4q + 3)^3$$

$$a^3 = 64q^3 + 27 + 3 \times 4q \times 3(4q + 3)$$

$$a^3 = 64q^3 + 24 + 3 + 144q^2 + 108q$$

$$a^3 = 4(16q^3 + 36q^2 + 27q + 6) + 3$$

$$a^3 = 4m + 3 \quad [\text{where } m \text{ is an integer} = 16q^3 + 36q^2 + 27q + 6]$$

Hence, the cube of any positive integer is in the form of $4m$, $4m+1$ or $4m+3$.

3. Show that the square of any positive integer cannot be of the form $5q + 2$ or $5q + 3$ for any integer q .

Solution:

Let the positive integer = a

According to Euclid's division lemma,

$$a = bm + r$$

According to the question, $b = 5$

$$a = 5m + r$$

So, $r = 0, 1, 2, 3, 4$

When $r = 0$, $a = 5m$.

When $r = 1$, $a = 5m + 1$.

When $r = 2$, $a = 5m + 2$.

When $r = 3$, $a = 5m + 3$.

When $r = 4$, $a = 5m + 4$.

Now,

When $a = 5m$

$$a^2 = (5m)^2 = 25m^2$$

$$a^2 = 5(5m^2) = 5q, \text{ where } q = 5m^2$$

When $a = 5m + 1$

$$a^2 = (5m + 1)^2 = 25m^2 + 10m + 1$$

$$a^2 = 5(5m^2 + 2m) + 1 = 5q + 1, \text{ where } q = 5m^2 + 2m$$

When $a = 5m + 2$

$$a^2 = (5m + 2)^2$$

$$a^2 = 25m^2 + 20m + 4$$

$$a^2 = 5(5m^2 + 4m) + 4$$

$$a^2 = 5q + 4 \text{ where } q = 5m^2 + 4m$$

When $a = 5m + 3$

$$a^2 = (5m + 3)^2 = 25m^2 + 30m + 9$$

$$a^2 = 5(5m^2 + 6m + 1) + 4$$

$$a^2 = 5q + 4 \text{ where } q = 5m^2 + 6m + 1$$

When $a = 5m + 4$

$$a^2 = (5m + 4)^2 = 25m^2 + 40m + 16$$

$$a^2 = 5(5m^2 + 8m + 3) + 1$$

$$a^2 = 5q + 1 \text{ where } q = 5m^2 + 8m + 3$$

Therefore, square of any positive integer cannot be of the form $5q + 2$ or $5q + 3$.

Hence Proved.

4. Show that the square of any positive integer cannot be of the form $6m + 2$ or $6m + 5$ for any integer m .

Solution:

Let the positive integer = a

According to Euclid's division algorithm,

$$a = 6q + r, \text{ where } 0 \leq r < 6$$

$$a^2 = (6q + r)^2 = 36q^2 + r^2 + 12qr \quad [\because (a+b)^2 = a^2 + 2ab + b^2]$$

$$a^2 = 6(6q^2 + 2qr) + r^2 \quad \dots(i), \text{ where, } 0 \leq r < 6$$

When $r = 0$, substituting $r = 0$ in Eq.(i), we get

$$a^2 = 6(6q^2) = 6m, \quad \text{where, } m = 6q^2 \text{ is an integer.}$$

When $r = 1$, substituting $r = 1$ in Eq.(i), we get

$$a^2 + 6(6q^2 + 2q) + 1 = 6m + 1, \quad \text{where, } m = (6q^2 + 2q) \text{ is an integer.}$$

When $r = 2$, substituting $r = 2$ in Eq.(i), we get

$$a^2 = 6(6q^2 + 4q) + 4 = 6m + 4, \quad \text{where, } m = (6q^2 + 4q) \text{ is an integer.}$$

When $r = 3$, substituting $r = 3$ in Eq.(i), we get

$$a^2 = 6(6q^2 + 6q) + 9 = 6(6q^2 + 6a) + 6 + 3$$

$$a^2 = 6(6q^2 + 6q + 1) + 3 = 6m + 3, \quad \text{where, } m = (6q^2 + 6q + 1) \text{ is integer.}$$

When $r = 4$, substituting $r = 4$ in Eq.(i) we get

$$a^2 = 6(6q^2 + 8q) + 16$$

$$= 6(6q^2 + 8q) + 12 + 4$$

$$\Rightarrow a^2 = 6(6q^2 + 8q + 2) + 4 = 6m + 4, \text{ where, } m = (6q^2 + 8q + 2) \text{ is integer.}$$

When $r = 5$, substituting $r = 5$ in Eq.(i), we get

$$a^2 = 6(6q^2 + 10q) + 25 = 6(6q^2 + 10q) + 24 + 1$$

$$a^2 = 6(6q^2 + 10q + 4) + 1 = 6m + 1, \text{ where, } m = (6q^2 + 10q + 4) \text{ is integer.}$$

Hence, the square of any positive integer cannot be of the form $6m + 2$ or $6m + 5$ for any integer m .

Hence Proved

5. Show that the square of any odd integer is of the form $4q + 1$, for some integer q .

Solution:

Let a be any odd integer and $b = 2$.

According to Euclid's algorithm,

$$a = 2m + r \text{ for some integer } m \geq 0$$

And $r = 0, 1, 2, 3$ because $0 \leq r < 4$.

So, we have that,

$a = 4m$ or $4m + 1$ or $4m + 2$ or $4m + 3$ So, $a = 4m + 1$ or $4m + 3$

We know that, a cannot be $4m$ or $4m + 2$, as they are divisible by 2.

$$(4m + 1)^2 = 16m^2 + 8m + 1$$

$$= 4(4m^2 + 2m) + 1$$

$$= 4q + 1, \text{ where } q \text{ is some integer and } q = 4m^2 + 2m.$$

$$(4m + 3)^2 = 16m^2 + 24m + 9$$

$$= 4(4m^2 + 6m + 2) + 1$$

$$= 4q + 1, \text{ where } q \text{ is some integer and } q = 4m^2 + 6m + 2$$

Therefore, Square of any odd integer is of the form $4q + 1$, for some integer q .

Hence Proved.

6. If n is an odd integer, then show that $n^2 - 1$ is divisible by 8.

Solution:

We know that any odd positive integer n can be written in form $4q + 1$ or $4q + 3$.

So, according to the question,

When $n = 4q + 1$,

Then $n^2 - 1 = (4q + 1)^2 - 1 = 16q^2 + 8q + 1 - 1 = 8q(2q + 1)$, is divisible by 8.

When $n = 4q + 3$,

Then $n^2 - 1 = (4q + 3)^2 - 1 = 16q^2 + 24q + 9 - 1 = 8(2q^2 + 3q + 1)$, is divisible by 8.

So, from the above equations, it is clear that, if n is an odd positive integer $n^2 - 1$ is divisible by 8.

Hence Proved.

7. Prove that if x and y are both odd positive integers, then $x^2 + y^2$ is even but not divisible by 4.

Solution:

Let the two odd positive numbers x and y be $2k + 1$ and $2p + 1$, respectively

$$\begin{aligned} \text{i.e., } x^2 + y^2 &= (2k + 1)^2 + (2p + 1)^2 \\ &= 4k^2 + 4k + 1 + 4p^2 + 4p + 1 \\ &= 4k^2 + 4p^2 + 4k + 4p + 2 \\ &= 4(k^2 + p^2 + k + p) + 2 \end{aligned}$$

Thus, the sum of square is even the number is not divisible by 4

Therefore, if x and y are odd positive integer, then $x^2 + y^2$ is even but not divisible by four.

Hence Proved

tamso ma jyotirgamaya

EXERCISE 1.4

1. Show that the cube of a positive integer of the form $6q + r$, q is an integer and $r = 0, 1, 2, 3, 4, 5$ is also of the form $6m + r$.

Solution:

$6q + r$ is a positive integer, where q is an integer and $r = 0, 1, 2, 3, 4, 5$

Then, the positive integers are of the form $6q, 6q+1, 6q+2, 6q+3, 6q+4$ and $6q+5$.

Taking cube on L.H.S and R.H.S,

For $6q$,

$$\begin{aligned}(6q)^3 &= 216q^3 = 6(36q^3) + 0 \\ &= 6m + 0, \text{ (where } m \text{ is an integer } = (36q^3))\end{aligned}$$

For $6q+1$,

$$\begin{aligned}(6q+1)^3 &= 216q^3 + 108q^2 + 18q + 1 \\ &= 6(36q^3 + 18q^2 + 3q) + 1 \\ &= 6m + 1, \text{ (where } m \text{ is an integer } = 36q^3 + 18q^2 + 3q)\end{aligned}$$

For $6q+2$,

$$\begin{aligned}(6q+2)^3 &= 216q^3 + 216q^2 + 72q + 8 \\ &= 6(36q^3 + 36q^2 + 12q + 1) + 2 \\ &= 6m + 2, \text{ (where } m \text{ is an integer } = 36q^3 + 36q^2 + 12q + 1)\end{aligned}$$

For $6q+3$,

$$\begin{aligned}(6q+3)^3 &= 216q^3 + 324q^2 + 162q + 27 \\ &= 6(36q^3 + 54q^2 + 27q + 4) + 3 \\ &= 6m + 3, \text{ (where } m \text{ is an integer } = 36q^3 + 54q^2 + 27q + 4)\end{aligned}$$

For $6q+4$,

$$\begin{aligned}(6q+4)^3 &= 216q^3 + 432q^2 + 288q + 64 \\ &= 6(36q^3 + 72q^2 + 48q + 10) + 4 \\ &= 6m + 4, \text{ (where } m \text{ is an integer } = 36q^3 + 72q^2 + 48q + 10)\end{aligned}$$

For $6q+5$,

$$\begin{aligned}(6q+5)^3 &= 216q^3 + 540q^2 + 450q + 125 \\ &= 6(36q^3 + 90q^2 + 75q + 20) + 5 \\ &= 6m + 5, \text{ (where } m \text{ is an integer } = 36q^3 + 90q^2 + 75q + 20)\end{aligned}$$

Hence, the cube of a positive integer of the form $6q + r$, q is an integer and $r = 0, 1, 2, 3, 4, 5$ is also of the form $6m + r$.

2. Prove that one and only one out of n , $n + 2$ and $n + 4$ is divisible by 3, where n is any positive integer.

Solution:

According to Euclid's division Lemma,

Let the positive integer = n

And $b=3$

$n = 3q + r$, where q is the quotient and r is the remainder

$0 \leq r < 3$ implies remainders may be 0, 1 and 2

Therefore, n may be in the form of $3q, 3q+1, 3q+2$

When $n=3q$

$n+2=3q+2$

$$n+4=3q+4$$

Here n is only divisible by 3

$$\text{When } n = 3q+1$$

$$n+2=3q+3$$

$$n+4=3q+5$$

Here only $n+2$ is divisible by 3

$$\text{When } n=3q+2$$

$$n+2=3q+4$$

$$n+4=3q+2+4=3q+6$$

Here only $n+4$ is divisible by 3

So, we can conclude that one and only one out of n , $n + 2$ and $n + 4$ is divisible by 3.

Hence Proved

JOIN SCHOOL OF EDUCATORS WHATSAPP GROUPS FOR FREE EDUCATIONAL RESOURCES

We are thrilled to introduce the School of Educators WhatsApp Group, a platform designed exclusively for educators to enhance your teaching & Learning experience and learning outcomes. Here are some of the key benefits you can expect from joining our group:

BENEFITS OF SOE WHATSAPP GROUPS

- **Abundance of Content:** Members gain access to an extensive repository of educational materials tailored to their class level. This includes various formats such as PDFs, Word files, PowerPoint presentations, lesson plans, worksheets, practical tips, viva questions, reference books, smart content, curriculum details, syllabus, marking schemes, exam patterns, and blueprints. This rich assortment of resources enhances teaching and learning experiences.
- **Immediate Doubt Resolution:** The group facilitates quick clarification of doubts. Members can seek assistance by sending messages, and experts promptly respond to queries. This real-time interaction fosters a supportive learning environment where educators and students can exchange knowledge and address concerns effectively.
- **Access to Previous Years' Question Papers and Topper Answers:** The group provides access to previous years' question papers (PYQ) and exemplary answer scripts of toppers. This resource is invaluable for exam preparation, allowing individuals to familiarize themselves with the exam format, gain insights into scoring techniques, and enhance their performance in assessments.

- **Free and Unlimited Resources:** Members enjoy the benefit of accessing an array of educational resources without any cost restrictions. Whether its study materials, teaching aids, or assessment tools, the group offers an abundance of resources tailored to individual needs. This accessibility ensures that educators and students have ample support in their academic endeavors without financial constraints.
- **Instant Access to Educational Content:** SOE WhatsApp groups are a platform where teachers can access a wide range of educational content instantly. This includes study materials, notes, sample papers, reference materials, and relevant links shared by group members and moderators.
- **Timely Updates and Reminders:** SOE WhatsApp groups serve as a source of timely updates and reminders about important dates, exam schedules, syllabus changes, and academic events. Teachers can stay informed and well-prepared for upcoming assessments and activities.
- **Interactive Learning Environment:** Teachers can engage in discussions, ask questions, and seek clarifications within the group, creating an interactive learning environment. This fosters collaboration, peer learning, and knowledge sharing among group members, enhancing understanding and retention of concepts.
- **Access to Expert Guidance:** SOE WhatsApp groups are moderated by subject matter experts, teachers, or experienced educators can benefit from their guidance, expertise, and insights on various academic topics, exam strategies, and study techniques.

Join the School of Educators WhatsApp Group today and unlock a world of resources, support, and collaboration to take your teaching to new heights. To join, simply click on the group links provided below or send a message to +91-95208-77777 expressing your interest.

**Together, let's empower ourselves & Our Students and
inspire the next generation of learners.**

**Best Regards,
Team
School of Educators**
